

Lithium-Ion Battery Multi-Purpose Fire Blanket

- Don't be reactive be proactive to eliminate risk to you and your family

As of 2023 over 1000 fires in Australia were caused by lithium-ion batteries. Fire and Rescue NSW reported that approximately 1 in 40 fires they attended were caused by lithium-ion batteries. In Western Australia an average of three house fires a week are caused by exploding lithium batteries.

- Be protected 24/7
- Withstands up to 1,000 degrees Celsius
- Minimum cost for maximum piece of mind
- Cover it and smother it
- Multiple sizes available
- Cover it up when not in use or charging

As more electric driven modes of transport are being developed and purchased, with that comes an element of risk especially when being stored or charged. Yes, battery technology is getting better but there is always the risk of **Thermal Runaway** in batteries which is a dangerous process where a damaged battery cell rapidly overheats, or incorrect charger can lead to fire or explosion.

By using our Multi-Purpose range of Fire-Resistant covers, you will have peace of mind by eliminating a lot of that risk of fire which as we have all seen time and time again as it just takes seconds to cause huge damage or even death on your property. Our covers can fit all styles of electric scooters, bicycles, mobility scooters, garden equipment and many more electric powered devices.
