WEEPflex

THE FOREST FIRE HOSE

The A.HABERKORN WEEPflex was specially developed for combating forest fires. In the firing order, the hose surface gets wet from the inside out. This will cool the hose and provides protection against embers, which is hidden in the ground, especially in forest fires.

SELF-WETTING TECHNOLOGY –

through perforated surface - complete wetting within 5 minutes / 3 bar

EMBERS AND FLAME RESISTANCE –

prevents wet hose surface a melting on hot surfaces

HIGH ABRASION RESISTANCE –

despite being lightweight, it is robust enough for use in forests and rocky terrain

LIGHTWEIGHT AND FLEXIBLE –

makes it easier use in any situation, no matter how steep

LOW FRICTION LOSSES –

due to smooth inner layer, no influence of the perforation on friction, also at small hose diameter

25, 38, 42, 45, 52 mm
DIAMETER
